

Sustainability Report 2019

MARCH 18, 2020

Hammond Manufacturing

Sustainability Report 2019

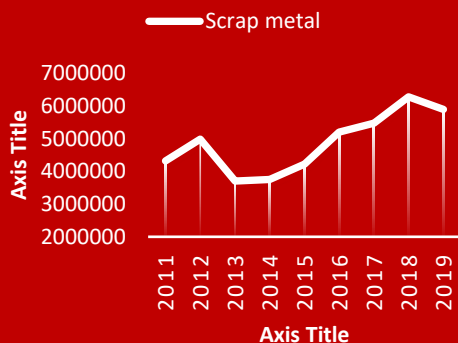

Vision

“Hammond Manufacturing Limited (HMCL) understands how important the equilibrium between the environment and the economy is to succeed hence why as a company; we are dedicated to help increase the recovery and recycling of our products”

Our commitment to the environment and the community is a vital part of who we are. Therefore, we are continually looking for new and innovative ways to reach our goal of recycling a 100% of our waste water, scrap steel and paper.

During 2011-2019 Hammond has diverted a total of 43,817,950 lbs. (scrap Metal) 681, 450.47lbs. (Scrap paper) and 17,106 lbs. of Electronic waste.

SCRAP METAL

Scrap Paper

E- WASTE

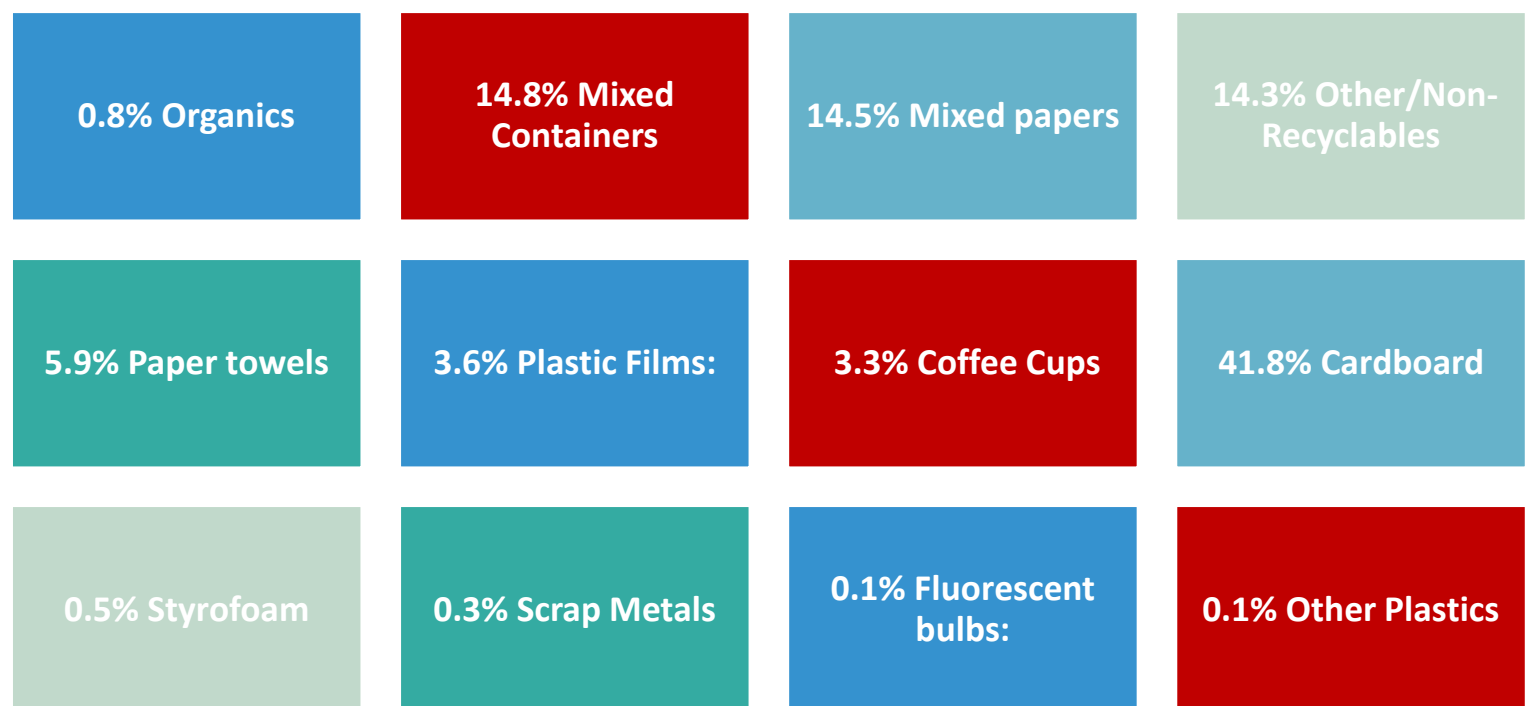

Metal Recycling: during the manufacturing process, scrap steel is collected for recycling (Combined Edinburgh Rd and Wilbert St)

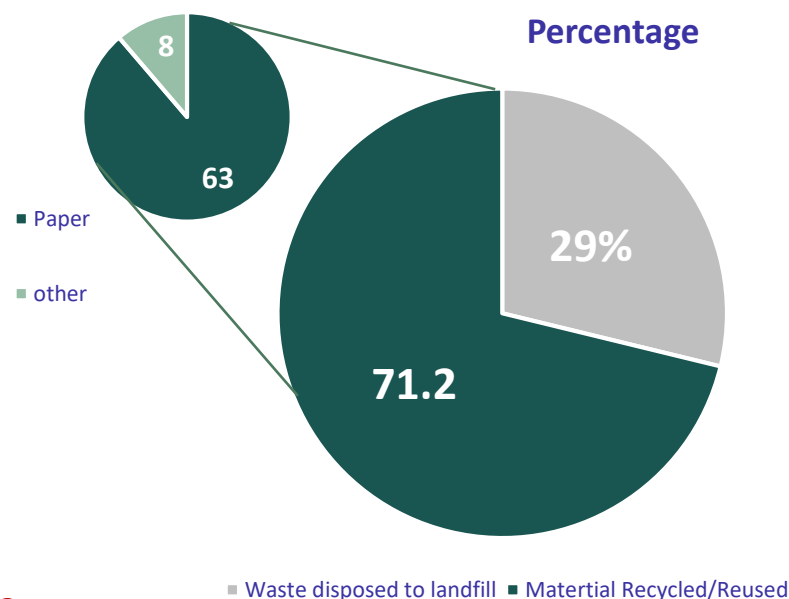

2019 total quantity of scrap metals = **5,891,424 lbs.**

- 5,148,645 lbs. of mild steel
- 639,454 lbs. of stainless steel
- 103,325 lbs. of aluminum

To better understand where our waste comes from and what we can do to further reduce the amount of waste that ends up in landfill. A third party company was contacted to conduct a non-hazardous waste audit at our Edinburgh location. The audit consisted of a sample of waste totaling approximately 73.37 kg that was collected from the facility and audited on November 28, 2019. Waste was collected from the various waste generation areas in the facility, including public areas, support services, cafeterias and office areas. The following summarizes the average overall waste composition determined from the audit:

Based on the waste diversion programs that are implemented on-site for mixed recyclables such as, paper, wood, scrap metals bulbs and electronic waste. The waste diversion rate was approximately **71.2%**. This value is slightly higher than the Ministry of the Environment, Conservation & Parks (MECP) provincial objective of **60%** waste diversion. Although our collection rate is higher than the objective set by MECP, Hammond will continue to find other options to decrease the amount of waste sent to landfills

Strategies Implemented During the years
